* Indicates package is maintained by former student advisee

phylosamp: An R package that implements novel tools for estimating sample sizes needed for phylogenetic studies, including studies focused on estimating the probability of true pathogen transmission between two cases given phylogenetic linkage and studies focused on tracking pathogen variants at a population level. (2024)

rcanvas: An R package for interfacing with the Canvas API (2023)

shinysurveys*: An R package to easily create and deploy surveys in ‘Shiny’. This package includes a minimalistic framework similar to ‘Google Forms’ that allows for url-based user tracking, customizable submit actions, easy survey-theming, and more. (2021)

matahari: An R package to conveniently log everything you type into the R console. Logs are stored as tidy data frames which can then be analyzed using ‘tidyverse’ style tools. (2019)

datasauRus: An R package made in collaboration with Steph Locke consisting of The Datasaurus Dozen, a set of datasets with the same summary statistics. They retain the same summary statistics despite having radically different distributions. The datasets represent a larger and quirkier object lesson that is typically taught via Anscombe’s Quartet. (2017)
